Lopatina, N. G.
THE DANCE OF BEES. [1961] [8]p.
Order from OTS or SLA $1.10 62-15688

Trans. of Pchelovodstvo (USSR) 1956, v. 33, p. 19-26.

DESCRIPTORS: *Insects, Conditioned reflexes, *Behavior

Experiments have shown that the dance of bees, like any other unconditioned reflex (instinct) of an animal, can be controlled by conditioned reflexes. If the physiological mechanisms by which they proceed are known. By experimentally changing the behavior of individual worker bees, the flight activity of the entire colony can be changed, since it is known that a dancing bee mobilizes 8 to 10 times as many bees from the hive to go out to the plants as does a non-dancing bee. The level of excitation of the bee's (Behavioral Sciences, TT, v. 7, no. 11) (over)

Koptev, V. S.
DRONE-BEARING BEES AND SWARMING OF BEE COLONIES. [1961] [4]p. 2 refs.
Order from OTS or SLA $1.10 62-15687

Trans. of Pchelovodstvo (USSR) 1957, v. 34, p. 31-32.

DESCRIPTORS: Insects, Reproductive system, Anatomy, Physiology, Agriculture.

Worker bees with developed ovaries, but not yet laying eggs, are called anatomical drone-bearers, and egg-laying workers are called physiological drone-bearers. Anatomical drone-bearers appear in all colonies that are swarming or preparing to swarm. Experiments showed that there are a large number of drone-bearers in some swarms, but that the presence of anatomical drone-bearers in colonies of bees is not a necessary condition for their swarming. The highest (Behavioral Sciences, TT, v. 7, no. 11) (over)
